Objective

Aspiring **Data Engineer** and ICT undergraduate (GPA 3.28/4.0) with hands-on experience in **Python, SQL, and Power BI**. Skilled in ETL pipeline design, data transformation, and database optimization, having processed **50K+ records** across real-world datasets. Seeking to grow into a full Data Engineering role by deepening expertise in pipeline orchestration and data modeling.

Education

Bachelor's Degree in Information and Communication Technology — **2023 – Present**
New Cairo Technological University — **GPA: 3.28/4.0**

Pearson BTEC International Level 3 Extended Diploma — **2020 – 2023**
Electrical and Electronics Engineering
El Salam Technical Integrated Cluster — **Grade: 95.4%**

Experience

Data Engineering Intern — **Jul 2026 – Present**
Digital Egypt Pioneers Initiative (DEPI) — Egypt · Hybrid

- Built and optimized ETL/ELT pipelines using SQL and Python, applying Microsoft Azure cloud-based data engineering concepts to real-world workflows.
- Applied data modeling, cleaning, and validation techniques within an Agile, Git-based team to support scalable analytics and BI solutions.

Projects

AuraSense – Smart Context-Aware System — Demo Link

- Engineered an intelligent automation system integrating object detection and emotion recognition ML models for real-time, context-aware decision-making.
- Implemented end-to-end data pipelines for real-time processing and pattern recognition, applying ML model deployment workflows.

Retail Sales Data Analysis 2023 — GitHub

- Developed an end-to-end analysis pipeline – ingesting, cleaning, and transforming 50K+ retail records using Python (pandas, NumPy) to surface customer behavior and revenue trends.
- Leveraged statistical analysis and data visualization (Matplotlib) to identify revenue-optimization opportunities and generate actionable business recommendations.

Sales Data Analysis — GitHub

- Designed a data wrangling and transformation pipeline to extract product performance and regional sales patterns from structured datasets.
- Performed data cleaning, exploratory data analysis (EDA), and visualization using Matplotlib and Seaborn to communicate findings and support data-driven decision-making.

Los Angeles Crime Analysis — GitHub

- Created a temporal and geographic analysis pipeline using Python to uncover crime hotspots and trend patterns across Los Angeles.
- Conducted EDA and data visualization to surface actionable insights from large-scale public safety datasets.

Certifications

- **BCG – Data for Decision Makers Job Simulation** – Forage **Nov 2025**
- **Python Data Associate** – DataCamp **Sep 2025**
- **Machine Learning with Python** – Coursera **Aug 2024**
- **Delivering Quality Work with Agility** – IBM **Jun 2024**
- **Mastering Object-Oriented Programming using C++** – MaharaTech **Jul 2025**
- **GitHub Foundations** – DataCamp **Sep 2025**

Technical Skills

Programming & Scripting: Python, SQL
Data Engineering: ETL Processes, Data Pipeline Design, Data Transformation, Data Cleaning, Data Extraction
Data Analysis & Statistics: Pandas, NumPy, Scikit-learn; Statistical Analysis; EDA; Data Mining; Data Wrangling
Visualization & BI Tools: Power BI, Matplotlib, Seaborn, Excel (Advanced), Dashboard Development
Databases: Database Optimization, Relational Databases
Business Intelligence & Reporting: KPI Tracking, Business Reporting, Performance Metrics, Data-Driven Decision-Making
Version Control: Git, GitHub

Languages

Arabic **Native**
English **B1**
